InfoSight

IDENTIFICATION THAT SURVIVES GALVANIZATION

NO LAMINATING REQUIRED

Introducing the all new

KettleTag® PLUS EZ™ from InfoSight

Start-to-finish traceability is now easier than ever. This industrial identification tag survives the entire hot dip galvanization process. Our unique design doesn't require time-consuming laminating, which means you can identify pieces up to three times faster.

With industrial grade laser markers from InfoSight, you can print on demand at the point of application. Our tags can be customized with a variety of messages, including alphanumeric characters, graphics, logos, and 1D and 2D barcodes, which remain readable even after galvanizing.
